

BAREGROUND ULTRA

PELLETED HERBICIDE

The Best There Is For Total Vegetation Control!

- **Long term vegetation control from one easy application. No inconvenience and cost of retreating weeks later.**
- **Unique Combination of Bromacil, Sodium Chlorate and Sodium Metaborate.**
- **Burns down existing weed growth.**
- **Provides long term control (over 1 year) of shallow and deep rooted annuals, perennials and woody plants.**
- **Formulated into an off-white, dust and odor free, easy to apply pellet.**
- **Easy to apply, no special equipment needed.**
- **Available in a durable 25 pound plastic bag.**

The Problem - Weeds

Controlling vegetation can be a complex problem. Hand labor, using mechanical devices, costs a lot of time and money and provides only temporary relief. And the use of inferior weed control products often produces similar results. Also, liquid spray herbicides can drift from the area of application and damage or kill desirable plants in adjoining areas.

Not only are weeds costly to eliminate by hand, they can be even more expensive if ignored. They cause economic damage through accidents and produce acids that decay wood and corrode expensive metal products such as fences, buildings, pipes and storage tanks. Furthermore, weeds are a potential fire hazard, and they mar the appearance of your property.

The Answer - BareGround Ultra

The simple answer to your weed control problem is **BAREGROUND ULTRA** pelleted, nonselective, residual herbicide.

One quick, easy application of **BAREGROUND ULTRA** provides season-long residual control of unwanted vegetation.

The pellets will readily dissolve, even a light morning dew will hasten solubility and the movement into the soil. A light rainfall or sprinkling is required to move the material into the root zone. Once in the root zone, the active ingredients are absorbed by the plant, causing it to turn brown. Root pruning also takes place. Smaller, succulent weeds are affected first; larger plants will yellow and turn brown at the tips as growth stops. Within days, the foliage and root systems of weeds and grasses die. A residual barrier remains active in the upper soil to control later-germinating seedlings.

IMPORTANT!

BAREGROUND ULTRA should not be used on land to be cropped, or near adjacent desirable trees, shrubs, plants or in greenhouses as injury may occur. Not for use around the home or lawn.

APPLICATION RATES

Annual Broadleaf
Weeds & Grasses.....1.0 – 1.5lbs./100 sq. ft.
Perennial Broadleaf
Weeds & Grasses.....1.8 lbs./100 sq. ft.

ACTIVE INGREDIENTS:

Bromacil..... 1.5%
Sodium Chlorate..... 30.0%
Sodium Metaborate..... 49.0%

INERT INGREDIENTS:..... 19.5%
TOTAL 100.0%

BROMACIL

Extremely effective broad spectrum, non-selective herbicide. Moderate solubility allows it to move down in the soil to effectively control deep root perennial and woody weeds.

SODIUM CHLORATE

Provides fast burndown of existing vegetation. It is a white, crystalline salt that looks like common table salt (Sodium Chloride) but, weight for weight, is 30-50 times more toxic to plants than table salt.

SODIUM METABORATE

Provides residual vegetation control activity. A white, crystalline salt, it is toxic to soil microorganisms which break down most other organic herbicides, thus quickly reducing their effectiveness.

SUMMARY

BAREGROUND ULTRA is an easy to apply product which will yield fast burn down of existing vegetation and season-long residual control of any regrowth. It controls annuals, perennials and woody weeds both shallow and deep rooted.

CAUTION!

Read and follow all label directions carefully. Use only for label specified applications. Follow specified safety procedures for handling, applying and disposal.
